MATT & LOW SHEEN

Superior Coating for Metal Surfaces

Flexi-Shield is an innovative, nanotechnology modified acrylic polymer coating formulated specifically as a refinishing system for weathered and old coated metal roofing, guttering, metal fencing and metal façade cladding.

The unique nanotechnology formulation properties substantially lower surface friction to reduce dirt pick up and retention, providing excellent long-term self-cleanability and exterior durability.

Flexi-Shield is available in low sheen or matt finishes and can be custom colour matched upon request.
